WEEDS CAN BE MADE VALUABLE!

Plow down Granular 'Aero' Cyanamid—200 to 500 pounds per acre—with weeds, crop wastes, grass sods, or non-legume cover crops.

This treatment will make these low-grade, inexpensive materials (they are worthless, or even harmful, when plowed down without fertilizer) as valuable as manure or clover for humus.

A LARGER INCOME

RESULTS are what you spend your money for—not fertilizer itself. There isn't anything particularly attractive about fertilizer, as such. You can't eat it, wear it, live in it, ride on it, or educate the children with it.

But you can do all of these things and more—with the *results* which the right fertilizer produces.

Granular 'Aero' Cyanamid is the right nitrogen fertilizer.

In *wet* seasons it doesn't wash out of the soil but stays right there and keeps pushing the crop.

In *dry* seasons, *if plowed down with cover crops or crop wastes before planting,* it induces deep rooting and a high degree of drought resistance — so keeps right on pushing the crop.

In *all* seasons it speeds up the transformation of coarse organic materials into humus, and at the same time supplies lime enough to neutralize the organic and nitric acids which form during the rotting process.

THERE'S A KNACK TO IT!

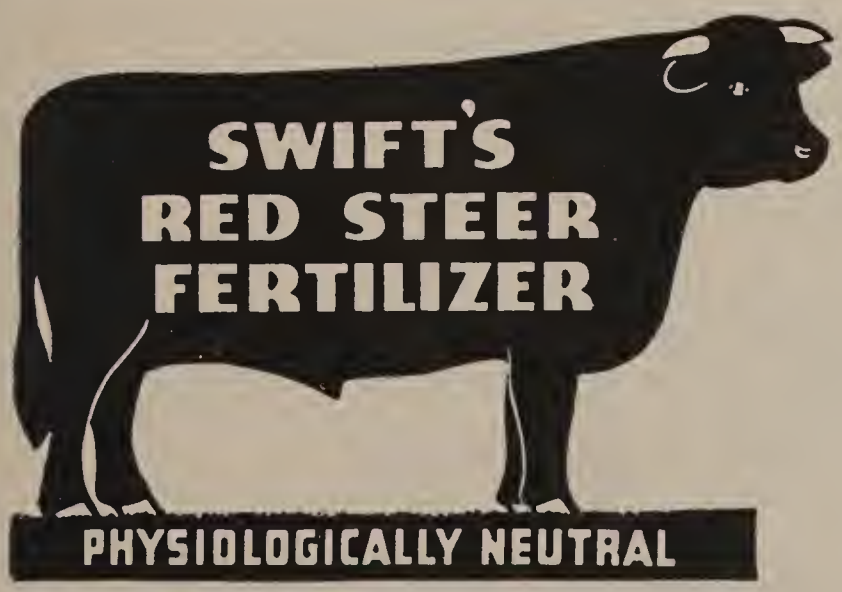
THERE'S a knack to making truck crops pay you an extra profit! The knack is in growing quality at low cost and to be ready for the early market.

Low growing cost isn't enough if quality is poor, or you get on the market late. Quality alone won't bring in top profits either. It's the combination of low growing cost, high quality and early maturity that make truck growing profitable.

Growing costs, quality and maturity . . . all are greatly dependent on the fertilizer used! That's what makes it so important to you that the fertilizer you use be strictly top-grade.

Swift Improved Red Steer Fertilizers have proved to be the "knack" thousands of truck growers needed to get the really profitable returns. This fertilizer is especially good for truck because it is both Physiologically Neutral and Non-Acid Forming. It will not leave an acid residue in the root zone of plants at any time. Red Steer supplies needed extra elements such as Calcium and Magnesium.

Swift's Improved Red Steer is the fertilizer that has been making the exceptional crops. Undoubtedly you've heard about it. Don't pass up extra profits another year . . . arrange now for your supply of Swift's Red Steer. We recommend them.



Since the large and modern Swift Fertilizer plant is so near, you are assured the best of service at all times.
